- J1 – Revised Turn Lane Warrant and Length Analyses
- J2 – Revised Synchro Traffic Analyses (2045 Design Field View Assumptions with Approved Growth)
- J3 – Revised Synchro Traffic Analyses (2045 Design Field View Assumptions with Supplemental Growth)

¹ **Note:** List continues from the original set of Appendices A-I, which are included in the previously-approved 2018 Traffic Design Report.

Introduction

The Route 228 Mars Railroad (RR) Bridge West Expansion project is a design effort for Pennsylvania Department of Transportation (PennDOT) District 10-0 to implement widening, capacity, and safety improvements along the SR 228 corridor from Franklin Road in Cranberry Township, to just east of Beaver Street Extension in Adams Township, Butler County, Pennsylvania (**Exhibit 1**).

Previous tasks on this project completed a project-specific Traffic Design Report² and related Safety Study that documented a comprehensive evaluation of existing and projected traffic operations, capacity, mobility, and safety conditions to support the overall infrastructure design. As the preliminary engineering and design efforts have continued to evolve since those submittals, a limited number of geometric design and development-related refinements have subsequently influenced some of the project's final intersection and turn lane configurations.

This document serves as Addendum 1 to supplement the 2018 Traffic Design Report and compile/validate changes to intersection configurations in the current Design Field View package.

Exhibit 1: Project Location Map

² Reference: WRA for PennDOT District 10-0, *Traffic Design Report, Route 228 Mars RR Bridge West Expansion*, February 13, 2018.

Design Refinement Influences

This Addendum specifically updates and summarizes the following influences on the project:

Enclave at High Pointe Development

This development area is located adjacent to SR 228 along High Pointe Drive. The site's potential influence was previously accounted for as "Site J" in the supplemental growth scenario and related long-term traffic projections as detailed in the 2018 Traffic Design Report (pp. 12-21). Since then, a development-specific traffic impact study³ was subsequently released, and new/active construction has commenced. The development activity influences proposed turn-lane configurations at two signals on SR 228, including Castle Creek Drive / High Pointe Drive (West) and Castle Creek Drive / High Pointe Drive (East).

Hespenheide Master Plan / Whitetail Meadows Development

This development area is located adjacent to SR 228 across from Myoma Road. The site's potential influence was previously accounted for as "Site E" in the supplemental growth scenario and related long-term traffic projections as detailed in the 2018 Traffic Design Report (pp. 12-21). While the planned development had been dormant for several years, new/active construction has now commenced. The development activity influences proposed intersection configurations and signal operations at the SR 228 / Myoma Road intersection, as well as SR 228 turnaround access in the vicinity.

Beaver Street Intersection Refinements

In balancing right-of-way, alignment, geometric, and related design issues, numerous alternatives for the SR 228 / Beaver Street Extension intersection were refined since completion of the 2018 Traffic Design Report. The final intersection location and configuration influence the related turn lanes and traffic signal operations.

Miscellaneous Design Field View Refinements

As the overall design has evolved, ongoing design refinements and/or constraints have required minor modifications to turn lane configurations, storage lengths, or related traffic signal operations at several intersections. Subsequent sections of this addendum summarize intersection-specific changes to confirm acceptable traffic operations and/or document corresponding refinements.

³ Reference: Wooster, *Transportation Impact Study for the Proposed Enclave at High Pointe Development*, March 16, 2018.

Design Field View Refinements by Intersection

As documented in the 2018 Traffic Design Report, existing focal points along the approximately three-mile project corridor included six signalized and four side-street stop-controlled intersections per **Exhibit 2**. An intersection-by-intersection review of the current design⁴, applicable intersection refinements, and any changes in anticipated operations (**Appendix J**) is summarized in the sections that follow.

Exhibit 2: SR 228 Study Intersections

SR 228 at Franklin Rd (SR 3021)

No substantial modifications from the initial 2018 design were made at this intersection. Previous analyses noted that a third continuous eastbound lane along SR 228 (west of Franklin Road and dropping as a right-turn lane at Franklin Road) may be added/constructed by others as part of a separate project. The status of that concept is unknown; however, the current SR 228 design includes a dedicated eastbound right-turn lane with a proposed storage length of approximately 330', which satisfies the 250' suggested for design per the 2018 Traffic Design Report (previous Appendix G1). Modifying the configuration from a full right-turn drop-lane to a separate right-turn lane with storage length had minimal influence on intersection operations (**Exhibit 3**).

SR 228 at Castle Creek Dr and High Pointe Dr (West)

Due to new/active construction for the *Enclave at High Pointe Development*, turn lane design and storage lengths were modified to accommodate the proposed development traffic. Revised turn lane warrant and length analyses are documented in the attached **Appendix J1**. The proposed eastbound left turn storage lane was extended from 175' to 250'. A new westbound right turn lane was also warranted with a proposed storage length of 175'. Turn lane and storage length additions showed a nominal improvement on intersection operations, mostly during the weekday PM peak (**Exhibit 3**).

⁴ Refer to the latest Design Field View plan submittals for details, including construction, traffic signal, and pavement marking plans.

SR 228 at Castle Creek Dr and High Point Dr (East)

Due to new/active construction for the *Enclave at High Pointe Development*, turn lane design and storage lengths were modified to accommodate the proposed development traffic. Revised turn lane warrant and length analyses are documented in the attached **Appendix J1**. The proposed eastbound left turn storage lane was extended from 250' to 275'. A new westbound right turn lane was also warranted with a proposed storage length of 250'. Turn lane and storage length additions showed a nominal improvement on intersection operations, mostly during the weekday PM peak (**Exhibit 3**).

SR 228 at Seven Fields Blvd and Adams Ridge Shoppes

No substantial modifications from the initial 2018 design were made at this intersection. Based on geometric design refinements, the proposed eastbound left and right turn lanes were refined to approximately 330', which satisfies the 275' suggested for design per the 2018 Traffic Design Report (previous Appendix G1). Storage length extensions had minimal influence on intersection operations (**Exhibit 3**).

SR 228 at Adams Ridge Blvd

No substantial modifications from the initial 2018 design were made at this intersection. Based on geometric design constraints, the eastbound right turn lane was included with 400' of storage length, which satisfies the 250' to 500' range suggested for design per the 2018 Traffic Design Report (previous Appendix G1). Storage length modifications had minimal influence on intersection operations (**Exhibit 3**).

The potential influence of future development on the north side of SR 228 at this location was previously accounted for as "Site K" in the supplemental growth scenario and related long-term traffic projections as detailed in the 2018 Traffic Design Report (pp. 12-21). That development was noted as having the potential to add a new fourth (southbound) leg to the existing intersection. At this time, however, no imminent development or active construction is anticipated. As such, the fourth leg and any related improvements are not included in the current SR 228 design, and it would be the responsibility of a future developer to re-analyze, design, and construct the intersection expansion in conjunction with potential future development plans by others.

SR 228 at Myoma Rd

Due to new/active construction for the *Hespenheide Master Plan / Whitetail Meadows Development*, a new fourth (northbound) leg and traffic signal operations have been implemented at this intersection. While previously expected only under the long-term supplemental growth scenario, the SR 228 design has been updated to reflect current development activity, including signalization and a new westbound left turn lane with 300' of storage. The implementation of traffic signal operations (versus prior stop-controlled assumptions) yields a significant change in levels-of-service (**Exhibit 3**).

SR 228 at Fox Trot Drive

This intersection is unchanged from the initial 2018 design assumptions. It will be restricted to right-in/right-out movements with the installation of median islands along SR 228.

Motorists intending to turn left into Fox Trot Drive (from SR 228 East) will, instead, continue along SR 228 East to Heritage Creek Drive, turn right to access the newly-proposed roundabout at Heritage Creek Drive and Scharberry Lane, and then use the roundabout to turnaround and return to Fox Trot Drive via SR 228 West.

Motorists intending to turn left out of Fox Trot Drive (to SR 228 East) will, instead, turn right out of Fox Trot Drive and continue along SR 228 West to Myoma Road, turn left at the new traffic signal at Myoma Road, and then use internal circulation roads that are currently being constructed as part of the *Hespenheide Master Plan / Whitetail Meadows Development* to turnaround and re-access SR 228 East directly from the development site.

SR 228 at Heritage Creek Dr (SR 3017)

Based on geometric refinements and to enhance intersection lane alignment, a second left turn lane was added to the northbound approach to mirror the previously-proposed dual left-turn lanes on the southbound approach. Turn lane additions and related traffic signal timing/phasing modifications had minimal influence on proposed operations (**Exhibit 3**).

Just south of SR 228, the intersection of Heritage Creek Drive and Scharberry Lane has also been updated to a new single-lane roundabout configuration. The roundabout is anticipated to serve local traffic only for the few existing and planned developments in the immediate vicinity. It will also accommodate turnaround access for nominal eastbound traffic to Fox Trot Drive (see description above).

SR 228 at Scharberry Lane

This intersection is essentially unchanged from the initial 2018 design assumptions and from existing conditions. It will continue to be restricted to right-in/right-out movements only, with alternate access available at the opposite end of Scharberry Lane via the SR 228 / Heritage Creek Drive traffic signal. The geometric design will vary slightly from prior assumptions with the relocation of Beaver Street Extension (see description below); however, modifications had minimal influence on intersection operations (**Exhibit 3**).

SR 228 at Beaver Street Extension

The current design relocates the junction of Beaver Street Extension and SR 228 approximately 1000' to the east. The layout incorporates a jughandle configuration to further accommodate SR 228 turnaround needs, and it includes adequate storage length per the 2018 Traffic Design Report (previous Appendix G1), including a 345' eastbound left-turn lane, 295' westbound right-turn lane, and a 75' southbound left-turn lane. Overall modifications from prior assumptions had minimal influence on intersection operations (**Exhibit 3**).

Exhibit 3: LOS Summary with Design Field View Refinements

Table Notes:

* Single asterisk denotes that one or more individual movements fail (LOS E/F).

** Double asterisk denotes that one or more overall approaches fail (LOS E/F).

^ Caret denotes that LOS represents stop-controlled side-street movement only.

Summary

Based on the refined analyses summarized above, it was determined that the latest Design Field View modifications will have only nominal influence on proposed intersection operations. Notable changes include:

- Minor adjustments to turn lane storage lengths at multiple intersections, all within a range that satisfies previous storage lengths suggested for design.
- Additional right-turn lanes westbound on SR 228 at the Castle Creek Drive / High Pointe Drive (West) and Castle Creek Drive / High Pointe Drive (East) intersections to account for the *Enclave at High Pointe Development*.
- Traffic signalization and intersection expansion at the SR 228 and Myoma Road intersection to account for the *Hespenheide Master Plan / Whitetail Meadows Development*, as well as coordination with the onsite circulation roads to support turnaround access for Fox Trot Drive (or similar travel needs).
- Incorporation of a single-lane roundabout at the intersection of Heritage Creek Drive and Scharberry Lane, which will carry localized onsite development traffic while also supporting turnaround access for Fox Trot Drive (or similar travel needs).
- Relocation of the Beaver Street Extension intersection with SR 228 and incorporation of jughandle operations to further support existing or future turnaround access needs for travel along SR 228.

Appropriate design refinements have been incorporated into the latest Design Field View plan submission for the project, including construction, traffic signal, and pavement marking plans. Moving toward final design, it should also be noted that appropriate U-turn signage and trailblazing for access to SR 228 East and/or West via turnaround opportunities at Myoma Road, Heritage Creek Drive, and Beaver Street Extension will likewise be incorporated as part of final design efforts.

Revised Turn Lane Warrant and Length Analyses

MEMORANDUM

Date: 08.21.2019

To: Eric Meyer, PE; Brent Barrett, PE
From: Chad D. Reese, PE
Subject: SR 228 Turn Lane Modifications
CC: File

Work Order Number: WRA #35004
Contract Number: ECMS #E02625
Project: Route 228 Mars RR Bridge West Expansion

This memo documents proposed modifications to turn lane warrants and storage length requirements along SR 228 at the intersections of Castle Creek Drive / High Pointe Drive (West) and Castle Creek Drive / High Pointe Drive (East). These modifications are required as a result of new/active construction for the *Enclave at High Pointe Development* with reference to Traffic Impact Study (TIS) documentation and volume projections reported by David E. Wooster and Associates, Inc.¹ in comparison to WRA's previously-assumed Route 228 data.²

Summary before/after comparisons of relevant intersection turning movement volumes and corresponding turn lane warrant and storage length revisions are included in the table below. All findings are based on modification of prior worksheets from Appendix G of the SR 228 Traffic Design Report, with changes limited to modification of the subject turning movement volumes within PennDOT's Turn Lane Warrant and Length Analysis Workbook spreadsheets.

Intersection, Movement	Peak Hour Volumes, AM (PM)		Turn Lane and Storage Length Requirements	
	Route 228 Data ²	Enclave Data ¹	Original Design ²	Revised Design
Castle Creek Dr / High Pointe Dr (West)				
EB Left-Turn	15 (50)	94 (85)	Warranted w/ 175' storage	Warranted w/ 250' storage
WB Right-Turn	0 (0)	56 (28)	Not Warranted	Warranted w/ 175' storage
Castle Creek Dr / High Pointe Dr (East)				
EB Left-Turn	30 (120)	65 (132)	Warranted w/ 250' storage	Warranted w/ 275' storage
WB Right-Turn	30 (25)	99 (43)	Not Warranted	Warranted w/ 250' storage

Summary data above suggests design changes as follows:

- EB left-turn lane storage lengths at both intersections should increase compared to previous findings.
- WB right-turn lanes at both intersections are newly warranted with storage length suggestions as noted.

Ongoing design refinements for the SR 228 corridor should incorporate the above changes with final conditions adjusted based on a review of potential design, right-of-way, or other field constraints at each location.

Intersection Summary

Description: Signal Permit No. TS-113-10

Date Issued: 3/24/95

Date Revised: 9/17/02

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.

Intersection Summary

Description: Signal Permit No. TS-185-10

Date Issued: 2-26-2003

Date Revised: 3-10-2008

~ Volume exceeds capacity, queue is theoretically infinite.

Queue shown is maximum after two cycles.

95th percentile volume exceeds capacity, queue may be longer.

Queue shown is maximum after two cycles.

m Volume for 95th percentile queue is metered by upstream signal.
